

Deck Fixes

TEAM RUBIXCUBE · SIH 2026 · PS 26097

Deck fixes — SIH 26097, per page

Reviewed 2026-09-28 against the primary sources in `docs/references/`, the codebase, and the five fact-check passes behind `docs/Utsav/video/26097_Video_Script_source.md`.

Severity key:

-  **BLOCKER** — factually wrong or wrong-project. A judge can catch it.
-  **CLAIM** — not supported by what we built. Soften or mark as planned.
-  **TYPO** — spelling/labelling.
-  **UPGRADE** — correct but weaker than it could be.

Page 2 — Problem / Proposed Solution / How it Addresses

BLOCKERS

1. **The title says "KALA SETU" — replace it with Our Solution.**  *Decided.* "Kala Setu" is the artisan/handicraft project's name (SIH 26090 — *kala* = art) and has no connection to NSQF skilling for SC beneficiaries. There is no project title for 26097, and the page does not need one — it needs a label for what it contains.

Page 2 title → **Our Solution**

Set it in the same type style as the other page headers (`TECHNICAL APPROACH` , `FEASIBILITY AND VIABILITY` , `IMPACT AND BENEFITS`) so the deck reads as one object. Right now page 2 is the only page whose header is a brand name rather than a section name, which is what made the leftover survive this long.

(Page 6 carries matching leftovers — see below. Two pages pointing the same way makes a copy-paste origin the likely explanation, so sweep all 26 slides for others.)

2. **No officer half anywhere on this page.** Four of the PS's five "Basic Issues under GIA" are about officers, not beneficiaries. The 5-step flow ends at "*ACTIONABLE LIVELIHOOD RECOMMENDATIONS*" — i.e. at the beneficiary. A submission that stops there answers one bullet in five, and this is the page that defines our scope for the reader. **Add a step 6:** district demand → Perspective Plan → statutory calendar.

CLAIMS

3. **Step 4, "NSQF-ALIGNED PATHWAY OPPORTUNITY MAPPING"** — "maps the beneficiary to suitable training" understates what is built and loses our strongest differentiator. The engine applies a **hard eligibility gate** (published NSQF entry requirements, with the schooling ↔ experience trade-off) *before* ranking, and emits a **NEAR-MISS with the exact gap** when she doesn't qualify. "Maps to suitable" is what every team will write. **Rename to "NSQF ELIGIBILITY CHECK & PATHWAY MAPPING"** and add the near-miss line.

INCOMPLETE

4. Two empty phone mockups (right column) — fill or remove.

5. Empty white box below them — fill or remove.

6. **Solution Video / App Link** both say "Click here" with no destination. Judges do click these.

TYPOS

Where	Wrong	Right
Problem box, icon 2	Limited awarness	Limited awareness
Solution box, icon 2	Beneficiary assesment	Beneficiary assessment

(The black Canva "exit full screen" bar across the title is a screenshot artifact, not a deck problem — ignore.)

Page 4 — Feasibility and Viability

BLOCKERS

1. **The SIH logo** says "SMART INDIA HACKATHON 2025". Every other page says 2026. Fix the logo.
2. **"Can integrate with existing govt. portal"** (Integration feasibility). This is the same claim we removed from the flowchart, and it does not survive checking: - The word **"API"** appears zero times in the 46-page PM-AJAY guidelines (verified by word-boundary grep). - The PM-AJAY portal **and the official AJAY mobile app** were launched by MoSJE on **26 May 2026**, with role-based district and state logins already built in. - **No public or third-party API / developer documentation exists.**

The jury owns that portal. **Rewrite to:** "Produces the Perspective Plan input in the format the officer uploads to the PM-AJAY portal" — same value, zero overclaim.

3. **Challenge 2 mitigation: "Convers in regional language and local dialects."** Dialect claims are the single most dangerous thing on this deck in front of MoSJE. Models *do* now exist (Bhashini's own ASR list carries Bhojpuri and Chhattisgarhi) and they are **still wrong roughly three words in ten** — Bhojpuri 27.8 WER, Chhattisgarhi 27.4, Magahi 30.4, Rajasthani 41.8 (ARTPARK-IISc SraVaani-1.0). **Rewrite to:** "Handles dialect speech at published error rates — the field is classified over a closed set, with phonetic matching and spoken read-back, so a wrong transcript still produces a right answer." That is both true and more expert-sounding.

CLAIMS

4. **"Uses govt. verified dataset (NQR, NSQF, Skill India, PM-AJAY)."** NQR and NSQF are real and in-repo (ai/data/nqr.json, 2,814 rows, sha256-pinned; the NSQF gazette in docs/references/). **"Skill India" and "PM-AJAY" are not datasets we hold.** Drop both, or relabel that row NQR + NSQF (imported) · PM-AJAY guidelines (policy source).
5. **Challenge 3 mitigation: "Direct linkage with local industry networks."** Not built, and "direct linkage" implies employer agreements we do not have. Soften to "region-specific opportunity mapping" — which is what the engine actually does.
6. **Challenge 1 mitigation: "Periodic profile updates to capture changing aspirations."** Reads as built; it is not. Either mark planned or fold it into the follow-up-call USP, where it belongs and is deliberate.

UPGRADE

7. **Program Viability is generic.** "Supports PM-AJAY livelihood & skill-development implementation" could be any team. Replace with the statutory hook nobody else will have: "Feeds the district's projects into the State's Perspective

TYPOS

Where	Wrong	Right
Feasibility, all four headings	feasibilty ×4	feasibility
Integration feasibility	scalibilty	scalability
Viability, 4th heading	Scalibility	Scalability
Challenge 2, mitigation 1	Convers in	Converses in
Challenge 2, mitigation 2	Accesible	Accessible
Challenge 3, mitigation 3	Guidnce	Guidance
Challenge 3, mitigation 3	enterprenership	entrepreneurship
Challenge 2, mitigation 3	easy , step-by-step	easy, step-by-step (space before comma)

Page 5 — Impact and Benefits

CLAIMS

1. **"Onboards instantly through regional dialect voice calls."** Two problems: "instantly" and "dialect". See page 4 item 3 — claim the error rate, never the fluency. **Rewrite:** *"Onboards through a voice call in her language — no form, no typing."*
2. **"Connects trained candidates with verified local employers."** Not built. There is no employer registry and no verification step anywhere in the codebase. **Rewrite:** *"Surfaces region-specific employment and enterprise opportunities"* — the PS's own fourth mandated output, and what the engine actually emits.
3. **"Routes verified beneficiary profiles to relevant skilling platforms."** "Verified" implies identity verification (Aadhaar/SECC), which is **PS 25152's problem, not ours**. We confirm answers with the beneficiary; we do not verify identity against a government register. **Rewrite:** `verified` → `confirmed`.
4. **The integration diagram (SIDH ↔ NCS ↔ PM-AJAY ↔ Employer Verification).** Four live integrations are drawn; none is built. Either add a `PLANNED` band across that panel, or redraw it as *"one confirmed profile, reusable by"* — which is honest and still shows reach.
5. **"Works on 2G feature phones."** Technically muddled — an IVR call uses the **voice network**, not 2G data, which is a *stronger* claim. **Rewrite:** *"Works on any phone that can make a call — no data connection at all."*
6. **"Enables post-training employment follow-up through voice check-ins."** This is our follow-up-call USP and it is good — but it is **not built** (the `outcome` table is populated by a human today). On a proposed-solution slide that is acceptable; just keep the verb future-facing and don't let anyone demo it.

UPGRADES

7. **The eligibility gate / NEAR-MISS does not appear anywhere on this page** — our clearest differentiator is missing from the impact story. Add to SC Beneficiaries: *"Tells her what she is eligible for — and for what she isn't, the exact gap."*
8. **SDG selection is right** (1, 4, 8, 10) and better-argued than most. No change.

9. The "PMKVY data – not PM-AJAY beneficiaries" honesty note on page 6 is excellent. Consider the same treatment here for anything marked planned. Visible scope-honesty scores.

Page 6 — Research and References

BLOCKERS

1. **Leftover artisan-project references — wrong problem statement.** All four of these belong to the handicraft/marketplace deck, not to PS 26097: - **Ministry of Textiles** — "*Handicrafts, handloom and artisan development programs*" - **Ministry of MSME** — "*Digital market access, ONDC onboarding and catalog creation*" - **Ministry of Commerce and Industry** — "*Market access, e-commerce exports for artisan*" - **Research paper [3]** — "*Behera et al., 2005, SME digital-commerce adoption barriers in Odisha*"
- ONDC, catalog creation and e-commerce exports have no connection to NSQF skilling for SC beneficiaries. **Delete all four.** This is the same leftover pattern as "KALA SETU" on page 2.
2. **Our single strongest source is not cited on the page that cites sources.** The 41% figure in the middle panel comes from it:

CAG Union Government (Civil) Performance Audit, Ministry of Skill Development and Entrepreneurship, Report No. 20 of 2025 — PMKVY, Para 3.6 (placement), Table 2.1(a) (40% in 10 job-roles), Table 2.1(b) (90.35% of Green Jobs in one role).

Add it, with the link. Also missing and worth adding: - **PM-AJAY Guidelines (Revised, May 2023)** — Ch.3 ¶7A.a.v.c (interest assessment), Ch.3 ¶9 p.26 (the statutory calendar), Ch.1 ¶6(c) (Perspective Plan authorship). - **NSQF Gazette Notification, June 2023** — the minimum-entry-criteria table our eligibility gate is built from. - **NQR** (nqr.gov.in) — the 2,814-qualification register, which is our actual corpus.

FACT

3. **"74.6% SC population lives in rural areas (Census 2011)."** The Census figure is **76.4%**. This looks like a digit transposition. **Verify and correct.**
- Everything else on the page checks out:

Claim	Verdict
20.14 crore SC population, 16.63% of total	✓ Census 2011
SC literacy 66.07%	✓ Census 2011
Overall literacy 72.98% , gap 6.91pp	✓ arithmetic correct
56.14 lakh certified → 23.18 lakh placed ≈ 41%	✓ CAG Report No. 20 of 2025, Para 3.6

One optional sharpening on the literacy gap: comparing SC to the **overall** rate understates it, because the overall rate includes SC. Against **non-SC (74.04%)** the gap is **7.97pp**. Both are defensible; the current framing is the conservative one, which is fine — just know the better number exists if you want it.

UPGRADES

4. **Large empty area, bottom-left.** The obvious filler is the piece of research that is genuinely ours and that nobody else will have: **the dialect error-rate table**. Bhojpuri 27.8 / Chhattisgarhi 27.4 / Magahi 30.4 / Rajasthani 41.8 WER,

~10.53 crore speakers, all non-scheduled. It is the page's strongest content and it currently isn't on it.

5. **Technical References ("Click here" ×3) have no visible destination.** Same as page 2 — fill or remove.

 TYPOS

Where	Wrong	Right
Page title	RESEARCH AND REFRENCES	RESEARCH AND REFERENCES
Right panel heading	GOVERNMENT POLICIES & REFRENCES	GOVERNMENT POLICIES & REFERENCES
Chart label, twice	PMKYY ST/SP	PMKVY STT/SP
Technical References, 1st	Speech & Language AI — no source link text	give it a real label

Cross-deck: three phrases to ban everywhere

Worth a find-and-check across all 26 slides, because each one is checkable and wrong:

1. **Any claim of API / data sync with the PM-AJAY portal.** No public API exists; the portal and its official app launched 26 May 2026 with district and state logins already in it. We produce what the officer uploads.
2. **Any claim of dialect support stated as fluency or coverage.** Claim the published error rate; never claim we solved it, and never claim no model exists (Bhashini carries two of the four — saying otherwise to MoSJE is fatal).
3. **"Verified" applied to beneficiaries.** Identity verification is PS 25152's problem. Ours is *confirmed* answers — a read-back the beneficiary agreed to.

And one to add everywhere it fits: **the four statutory dates.** Every team will have arrows between a district and a state. Only a team that read page 26 has 1st week April → 15 April → 21 April → 1st week May.
